## 48DCXC-16-2X100-A0 (Link)

The Server Technology® -48VDC Switched PDU provides control of outlet power and per-outlet current measurement through the build-in Web and CLI interfaces as well as through SNMP. Temperature and humidity measurements can be provided via optional probes. The Switched "Primary" PDU can be connected to a Switched "Link" PDU to extend the network access to the redundant or secondary power feed.

## Key Features

### Network Monitoring

Gain access to valuable data through connections including HTTP(S), SSH, Telnet, SNMP, (S)FTP, SMTP, Syslog, LDAP(S), RS-232 serial, and more.

### Star Multi-Linking

PRO2 provides the ability to link up to four power circuits using one IP address. Primary Expansion PDU provides backup power to network card.

### Disconnect Rated Circuit Protection

Each output is protected by a fuse or circuit breaker and is rated for hot disconnect.

### Output Control

Cycle power to individual outputs or groups of outputs to reboot devices or to power off unused terminals.

### Hot-Swap Network Card

Network access is ensured when power is lost to the Primary unit with backup power provided by the Linked unit.

### Temperature/Humidity Monitoring

Primary and Expansion (select products) units each support two external 10' (3m) T/H probes. Receive SNMP-based alerts and email notifications.

### Output Current Monitoring

Network monitoring provides access to current draw at each output and alerts when high usage risks a tripped circuit.
